| Visual inspection of all flues  |                            |                    |                                 |                      |                      |                         |                      |                 |
| Visual inspection of all accessible areas of chimney  |                            |                    |                                 |                      |                      |                         |                      |                 |
| Demolition of some part or all of chimney to inspect concealed areas  |                            |                    |                                 |                      |                      |                         |                      |                 |
| Truck-mounted vacuum for ultimate dust/soot control   |                            |                    |                                 |                      |                      |                         |                      |                 |
| Clean extremely large chimneys, fireplaces or vents with built-in heat tubes  |                            |                    |                                 |                      |                      |                         |                      |                 |
| Clean interior of oil burning appliances, if applicable   |                            |                    |                                 |                      |                      |                         |                      |                 |
| Apply Creaway product if you have wood burning appliance with glaze creosote  |                            |                    |                                 |                      |                      |                         |                      |                 |

\* Glaze creosote is not removable until specially treated with Anti-Creo-soot or Cre-Away.  
Fireplace ash dump cleaning not included with any level of chimney sweeping. Proposal provided upon request (individual situation).

**Note:** Servicing commercial chimneys may require special considerations. The chimney may have vented coal or oil in the past which will always require the use of our truck-vac for extreme dust/soot control. It may also require other equipment such as a man-lift for service access. You will be advised prior to work beginning.
